

IDC4251C Module 3 Project

This is the project for Module 3. There is no Canvas submission, all submissions will be made to your GitHub Classroom repository after accepting the invitation.

This project follows Chapter 3 of the Microsoft Power BI video course.

All data files for this project can be found in the GitHub Classroom repository.

In the project you will start with your blank template workbook from Module 2.

In the blank workbook complete the tasks as specified in the chapter videos. Take a screen snip of the **Transform Data tool** (select it from the ribbon) in your workbook with the aggregated "**population-2010-2040**" query selected. This query should appear in the "Other Queries" group (your image should also show the names of the queries in new "Source" query group).

Save your work book as "query-editor-basics".

Commit your screen snip and workbook to the repo.
